
AUGEO CLEAN MULTI

We declare that **AUGEO CLEAN MULTI** is obtained from the acetalization reaction of glycerin.

Regulation (EC) No 1881/2006 of 19 December 2006 on setting maximum levels for certain contaminants in foodstuffs establishes maximum levels of some heavy metals (cadmium, lead and mercury) in foodstuffs.

Directive 94/62/EC on packaging and packaging waste establishes maximum levels of the sum of concentration of some heavy metals (cadmium, lead, mercury and hexavalent chromium).

Directive 2011/65/EU of 8 June 2011, restricting the use of certain hazardous substances in electrical and electronic equipment has as one of its objectives of reduce the waste management problems associated with the heavy metals and flame retardants concerned.

Neither metals nor metallic derivatives as reagents or catalysts are added intentionally during the whole manufacturing process of **AUGEO CLEAN MULTI**.

Therefore the presence of these substances is not expected even though no analytical results of metals are available in this context. The presence of metals at trace levels is only linked to mineral impurities present in the raw materials used.

Equipment and piping are constructed of carbon steel or stainless steel. The composition of these materials may vary, but usually the compounds are Iron, Carbon, Phosphorus, Sulfur, Silicon, Chromium, Nickel, and in some cases, Molybdenum and Copper. Corrosion is a natural possible source of some of these metals at trace levels.

However any kind of monitoring was considered to be implemented in the finished products, raw materials and product processing, but we have no reason to expect the heavy metals are present in this product.

AUGEO CLEAN MULTI – HEAVY METAL

Above statement is valid for **AUGEO CLEAN MULTI** manufactured in Brazil
